

Set Answer 1

Scenario based questions

1. Spelling Correction

Logic

- Take the sentence
- Split it into words
- Compare each word with a dictionary
- If a word is incorrect, find the closest correct word
- Replace it.

2. Count Words in Customer Reviews

Logic:

- Take the review
- Convert it to a standard format
- Split into words
- Count how many times each word appears.

3. Identify Questions in Chat Messages

Logic:

Check the message for question indicators such as **question words** (what, why, how, when) or a **question mark (?)**.

4. Language Detection

Logic

- Take the user's text
- Pass it to a language detection model/library
- Identify the language
- Return the detected language.

5. Create Tags from Blog Articles

Logic:

- Take the article
- Clean the text
- Remove unnecessary/common words
- Identify important words or phrases
- Use them as keywords/tags.

6. Convert Text to Lowercase**Logic:**

Convert every character in the text to lowercase so that the same word with different capitalization is treated as the same word.
